Introduction

This year's tour to the Pampas and Patagonia brought us most of the typical birds we are used to get together with a few additional ones. At the beginning of the trip, some droughts in the pampas played against us, but we managed to get the most important species, including the endangered Pampas Meadowlark, Olrog's Gull and South American Painted Snipe. Later on, we reached the semi-desert habitats of San Antonio Oeste and Peninsula Valdes where we had great views of several endemics including Rusty-backed Monjita, Patagonian Canastero, Carbonated Sierra-Finch and White-headed Steamerduck. To these we added views of hundreds of Burrowing Parrots, Hudson's Black-Tyrant and Black-crowned Monjita.

The steppes and woods of Patagonia treated us with superb views of Magellanic Woodpecker, Rufous-tailed Plantcutter (kind of weird thing having a Cotinga species this far south) and a group of White-bridled Finches. Some of the highlights of the most remote parts of Patagonia were a group of four Patagonian Tinamous and another four Ruddy-headed Geese, and eleven (!) Hooded Grebes in our traditional spot at the Strobel plateau. An Austral Rail treated us with excellent views at the lagoon just in front our lodge and a Lesser Horned Owl allowed us to take photos at close distance.

The last days in the island of Tierra del Fuego were dedicated to clean up our list, producing great views White-throated Caracara, Yellow-bridled Finch and a couple of Rufous-legged Owls!

At the end of the trip we counted a total of 273, a record for this tour!
